AGRO-ADVISORY BULLETIN FOR KODAGU DISTRICT

Issued jointly by, UAS, Bengaluru & Indian Meteorological Department

Weather forecast for the next five days (From 06-03-2024 to 10-04-2024)

Parameter	06.04.2024	07.04.2024	08.04.2024	09.04.2024	10.04.2024
Rainfall (mm)	2	4	0	4	10
Max. Temp. (°C)	36	35	34	34	33
Min. Temp. (°C)	20	20	19	19	17.5
Sky condition (Octas)	5	3	5	3	5
Relative humidity (%) 0830 hours	86	95	95	94	91
Relative humidity (%) 1730 hours	25	24	33	35	34
Wind Speed (kmph)	6	7	6	6	5
Wind Direction	225	215	215	245	200

Forecast Summary

As forecast received from IMD, Partially cloudy sky with light rainfall may be expected from 06.04.2024 to 10.04.2024 in Kodagu district. The day temperature is expected to be 33-36°C & night temperature is expected 17.5-20°C. The relative humidity in the morning hours is expected to be 86-95% & afternoon relative humidity is expected to be in the range of 24-35%. Wind speed expected to be 5-7 km/ hr.

Recommendations to the farmers:

Crop	Pest/Disease	Damage symptoms	Control measures
<ul style="list-style-type: none"> • Water Management: Ensure adequate water supply to crops. Implement efficient irrigation systems such as drip irrigation to minimize water loss through evaporation. • Crop Selection: Opt for drought-resistant or heat-tolerant crop varieties that can withstand high temperatures. • Timing of Farming Activities: Schedule farming activities such as planting, watering and harvesting during cooler parts of the day, typically early morning or late evening, to minimize heat stress on plants and reduce water evaporation. • Mulching: Apply mulch to retain soil moisture and regulate soil temperature. Mulching also helps to suppress weed growth, reducing competition for water. • Monitoring: Regularly monitor soil moisture levels, crop health and animal behavior to detect 			

	<p>signs of heat stress or dehydration early.</p> <ul style="list-style-type: none"> • Livestock Management: Ensure adequate ventilation and access to clean water and shade for livestock. Avoid moving animals during the hottest parts of the day. • Poultry: Ensure that poultry houses are well-ventilated and provide adequate shade to reduce heat stress on birds. Install fans or misting systems to help cool the environment. Ensure a constant supply of cool, fresh water for the birds to drink. Consider adding electrolytes or vitamins to the water to help birds cope with heat stress • Vermicompost: As dry weather is predicted for the next five days, care should be taken to maintain the optimum moisture level of 60% in vermicompost pits.
COFFEE	Harvested coffee has to be sun dried to its standard moisture content, and stored in a well ventilated dry place. • After harvesting it is advised to collect (gleaning) coffee berries completely from the plant and fallen berries from the ground to avoid berry borer incidence.
BLACK PEPPER	Mulch the basins of pepper vine with dry leaves to conserve soil moisture and to avoid general yellowing and provide irrigation of 50 litres of water every week per vine.
Cattle management during summer months	<ul style="list-style-type: none"> • Maximum temperature expected to rise in coming days so tie the livestock animals in shade / cool place. • Put 4-6 inches of grass cover on the cattle shed, water 2-3 times in the afternoon and also water the floor and walls of the cattle shed. This keeps the cattle shed fairly cool. • Arrangements should be made so that air can flow easily in the cattle shed. • Clean water should be given to the cattles. • Don't allowed the cattle to graze during afternoon period when the temperature is high, cattles should be allowed to graze in the morning or evening time.

Block level weather forecast (From 06-04-2024 to 10-04-2024)
