AGRO-ADVISORY BULLETIN FOR KODAGU DISTRICT

Issued jointly by, UAS, Bengaluru & Indian Meteorological Department

Weather forecast for the next five days (From 14-02-2024 to 18-02-2024)

Parameter	14.02.2024	15.02.2024	16.02.2024	17.02.2024	18.02.2024
Rainfall (mm)	0	0	0	0	0
Max. Temp. (°C)	31	30	30	31	31
Min. Temp. (°C)	15	14	15	14	15
Sky condition (Octas)	0	2	2	0	1
Relative humidity (%) 0830 hours	74	78	70	74	57
Relative humidity (%) 1730 hours	17	23	22	19	17
Wind Speed (kmph)	7	7	8	9	7
Wind Direction	80	110	80	80	90

Forecast Summary

As forecast received from IMD, Cloudy sky with no rainfall may be expected from 14.02.2024 to 18.02.2024 in Kodagu district. The day temperature is expected to be 30-31°C & night temperature is expected 14-15°C. The relative humidity in the morning hours is expected to be 57-78% & afternoon relative humidity is expected to be in the range of 17-23%. Wind speed expected to be 7-9 km/ hr.

Recommendations to the farmers:

Crop	Pest/Disease	Damage symptoms	Control measures
<ul style="list-style-type: none"> Due to dry weather prevail for next four days, farmers may take up irrigation to the dry land horticultural crops and other field crops depending on soil and crop condition. 			
Cowpea	Aphids	Several individuals suck the sap from tender shoots, flower buds, flowers, leaves and tender pods. Yellowing of leaves, shrivelled grains and sooty mold on leaves. To manage this pest spray Dimethoate – 30 EC. @ 1.7 ml./liter water spray. 200 lit. Spray mixture/acre.	
Mango	Powdery mildew and	<ul style="list-style-type: none"> Low temperature and higher humidity in morning hours is congenial condition for occurrence of powdery mildew disease and leaf hopper pest on mango orchard, hence 	

	hoppers	<p>farmers are advised to take control measure to manage these pest and disease.</p> <ul style="list-style-type: none"> • To manage powdery mildew disease take spray of 3.0 g. Sulphur 80 WP or 1.0 ml. Hexaconazole 5 EC.at flowering and fruiting stage. • To manage hopper incidence take the spray of 0.3 ml Imidachloprid 17.8 SL.in a lit. water before flowering and when fruits are pea size.
Coconut	Rugose whitefly	<p>The immature and adult whiteflies have a sucking feeding habit, feeding on the under surfaces of the leaflets. Extensive feeding of the insect leads to the excretion of honey dew which encourages growth of the fungus Capnodium sp.which affects the photosynthetic efficiency of the plant.</p> <p>Sooty mould (Capnodium sp.) growth on the leaf surface can be flaked out by spraying 2.5% of maida paste solution mixed with detergent/ Khadi soap @ 5g/ l.</p> <p>In severe cases, spray only neem oil 0.5% or NSKE 5% and avoid spraying any form of insecticides.</p>
Livestock		<ul style="list-style-type: none"> • To protect the new born calves from cold, provide straw/hay bedding to young calves, keep the bedding material dry and change regularly. Expose animals to sunshine during afternoon hours. Possibility of fall in night temperatures keep the animal under shed and clean around to control fly and mosquito in cattle shed. • Feed the animals with quality fodder along with 50-100 gram mineral mixture during early morning and evening hours. This increases milk productivity and enhance the animal's immunity. To avoid occurrence of milk fever in milking animals, farmers are advised to feed orally easily absorbable calcium supplements. • Due to prevailing of high humidity farmers are advised to keep clean around the animal shed to avoid the infestation of house fly/other.
